SKYLIGHT MIDSPOT lamps have been designed specifically for tall, vertical, planted terrariums. They are very effective in inducing production of carotenoids in plants such as bromeliads. 2 versions with different beam angles are manufactured - **V55 and V25**. MIDSPOT lamps can be position on the glass top of a vivarium (recommended). Mesh top is allowed as long as it is manufactured from metal.

They can be paired with MID-30 lamps in terrariums, in which high level of lighting is desired in the bottom part of the terrarium as well as in the top part.
